Task of the Newborn Screening is to detect treatable metabolic diseases and endocrine disorders as early as possible so that every child, through early

treatment and diet could have normal development.

Mecklenburg-Vorpommern is the first federal state in Germany which will offer in future an additional screening on cystic fibrosis for newborns. On Monday, the 15th October 2012, the project and the expansion of Newborn Screening were presented to invited members of the media. "In Mecklenburg-Vorpommern all newborns have a right to a Newborn Screening for congenital, treatable diseases of the metabolism and hormones. This didn't include a study on cystic fibrosis until now" said the director of the Institute of Clinical Chemistry and Laboratory Medicine, Professor Matthias Nauck. "Cystic fibrosis is a common and very serious inherited metabolic diseases in Central Europe. An early diagnosis is very important for the affected patients. "
